Critique of Political Economy – Overall Development in a Formalism

By Shomit Sirohi

Introduction

Overall development means complex points in a monad, which then is graph theory-like – which means forms, or formalism, and formalistic because in

fact it is one form like a Tarde-form perhaps – or Hegelian form. That then is Kabbalistic – what Moishe Postone does in German abstractishemes and such words as developmentalistiche.

I. A Complex Monadology of the Abstract Thing called Capital – why Moishe Postone is

Correct but can be Developed

Moishe Postone argues for abstract time and concrete time which then comes from abstract labour and concrete labour and socially necessary labour time, and its necessary character.

Now fill this with German – one complex movement of

Formalishtics – is then in fact the formal treatment of capital – its form, or formalism – which then in Postone is abstraction the word which does it all.

II. How Does German Language become simple – just the formalishtics

So what is abstraction for Postone even in German in fact –

becomes formalishtics in Sirohi – the formal aspects.
